Project list:

VAT Online
VAT management system is the best quality VAT software that covers all of your VAT requirements as per the National Board of Revenue (NBR), Bangladesh rule. It is special software for trading, non-trading, purchase, production, manufacturing, VAT challan, import-export and small /medium/ largest or any other types of companies where in need to maintain VAT payments in Bangladesh. There is mushok impact on every financial transaction. At the end of every month there creates an automatically generates mushok records separately. If this was manually written/driven, could be time consuming and there would be possibility of human error.

School Management System
This project is a web based application which can be used to input process and view student information our main objective to create a user friendly web server based database system that can manage all the work of a School Management System. The project provide us the information about student record, school faculty, school timetable, school fee, school examination result and notice board.

Vehicle Workshop Management
Vehicle Workshop Management can track on vehicle issues and repairs. Manage all kind of parts and other stock. Repairing and maintenance services of all types of light and medium vehicles including up graduation of an of any cars as well as periodical of any cars as well as well to periodical lay up repairs and life extension of vehicle. There are plenty of transaction in workshop as like Pre-inspection, Job card, Consumption Demand, Transfer Out, Transfer In, Consumption Return, Demand Request etc. Moreover 10 different location are using this application and we can easily monitor daily wise transaction on location wise. Status report control,report consumption report, cost report, Item ledger etc.

Secondary Sales System
It is a sales system from importer warehouse to distributor point. We can monitor importer warehouse stock. We can generate importer's sales report like item wise, daily wise, dealer wise, SR wise etc. Management manipulate this report for their business.

Canteen Management System
In this application employee must need to do staff ID card punch. After that they will get food token. Without token food does not provide. Food bill reduced from salary.

Vehicle Hire Management System
By using this application we can hire vehicle with convenient fare. Admin can create schedule and transport agency can confirm booking.

Optical Character Recognition
This is a desktop application for character recognition by which we can recognize any type of printed character. Application is developed by using C# language and artificial neural network.

Online Blog Application
It is developed by ASP.NET web form. In this application as a reader can read five recently published article, five most viewed article, user's comments etc. As a writer, you want to create new article and publish it latter. Anyone can search articles with free text.

Desktop Application
Inventory System, POS, Fair Management System, Voting System etc.
